PREFACE

This Personal Discovery Workbook is designed to introduce you to the concepts of Team Management Systems and its suite of feedback instruments, designed to improve personal and team performance in the workplace.

The workbook should be used in conjunction with your personal Team Management Profile to help you understand how you prefer to approach work. The underlying theory is discussed, and the various exercises and case studies should help you 'discover yourself'.

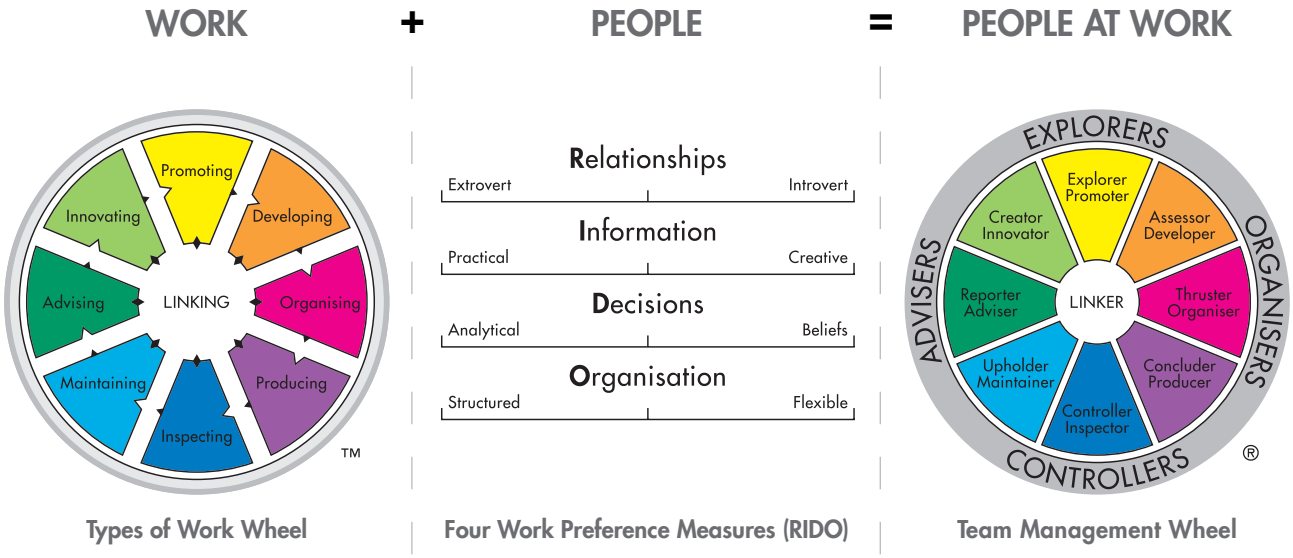
With over two and a half million profiles completed worldwide, the work of Dr Margerison and Dr McCann has laid a foundation of unparalleled research that continues to be developed by the TMS team as they strive to 'ignite human potential worldwide'.

What Makes Teams Successful?

Working with teams all over the world, Margerison and McCann recognised that some teams were highly successful, whereas others, with similar experience, skills and abilities, failed.

They interviewed many managers and team members and developed two models of teamwork. The first model, the Types of Work Wheel, defines the nature of work in a team. The second model, the Four Work Preference Measures (RIDO), defines the four aspects of work preference.

By adding the model of work to the model of people, Margerison and McCann developed the Team Management Wheel to describe the task preferences people have for different work activities, as well as the role preferences they tend to play in teams.



Types of Work Wheel

Through a comprehensive, worldwide programme, Team Management Systems (TMS) researched teams across all types of industries, with the goal to discover the differences between high and low performing teams. From this research, we identified nine key success factors that form the basis of outstanding teamwork.

These activities are shown in the Types of Work Wheel.

Types of Work Wheel

Advising	Gathering and reporting information
Innovating	Creating and experimenting with ideas
Promoting	Exploring and presenting opportunities
Developing	Assessing and testing the applicability of new approaches
Organising	Establishing and implementing ways of making things work
Producing	Concluding and delivering outputs
Inspecting	Controlling and auditing the working of systems
Maintaining	Upholding and safeguarding standards and processes
Linking	Coordinating and integrating the work of others

The nine essential activities of the Types of Work Wheel

To be an effective team, it is important to concentrate on each of these activities. If any factor is weak, then the team needs to analyse the deficiencies and put plans in place to strengthen that factor.

Advising

Advising work is concerned with giving and gathering information. It involves finding out what others are doing in your own area of work and ensuring that you are following best practice. Information may need to be gathered from articles, reports, books or the internet, or by meeting and talking with people. It means ensuring that you have all the information available for the team to make the best decisions and deliver results.

Innovating

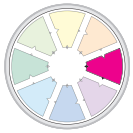
Innovating is a key aspect of teamwork and involves challenging the way things are currently being done. Technology is changing so quickly that the way you are currently performing tasks may no longer be delivering competitive service. Innovation is essential for all teams. There are always better ways of doing things if you only take time to discover them.

Promoting

To obtain the resources — people, money and equipment — to carry out your work, you have to 'sell' what you are doing to other people. Resources to implement new ideas will only be given if your team can persuade and influence decision-makers in your organisation. Promoting to customers or clients both inside and outside the organisation is also important if you are to continually deliver what people want.

Developing

Many ideas don't see the light of day because they are impractical. The Developing activity ensures that your ideas are moulded and shaped to meet the needs of your customers, clients or users. It involves listening to their needs and incorporating these into your plans. Developing will ensure that what you are trying to do is possible, given the resource constraints of your organisation.



Organising

Here the emphasis is on getting into action and making things happen. It involves Organising the team so that everyone knows what they have to do, how, and when. Clear goals have to be established and action taken to ensure that results are delivered on time and to budget.

Producing

Once plans are set up and everyone knows what has to be done, the team can concentrate on Producing. This activity focuses on delivering the product or service on a regular basis to high standards of effectiveness and efficiency. It is the Producing function that ensures the team continually delivers the required outputs.

Inspecting

Regular checks on work activities are essential to ensure that agreed standards are achieved. Quality audits of your products or services will ensure that your customers or clients remain satisfied. Inspecting also covers the financial aspect of work in your team, as well as the security, safety and legal aspects.

Maintaining

All teams need to uphold standards and maintain effective work processes. Your car will fail if it does not have its regular service. Teams can fail too, if the team processes are not regularly checked and maintained. Maintaining ensures that quality standards are upheld and that regular reviews of team effectiveness take place.

Bringing it all together: **Linking**

The Types of Work Wheel also contains a ninth factor, known as Linking, which involves coordinating and integrating people and tasks.

Linking is not a Type of Work, instead, it is a set of skills that any team member can contribute to the team effort. Effective use of Linking Skills is essential for a highly efficient and coordinated team.

Activity: Personal Snapshot

Circle the number which best rates your effectiveness and enjoyment on each of the Types of Work factors.

TASKS	EFFECTIVENESS	ENJOYMENT
Advising Gathering and reporting information	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Innovating Creating and experimenting with ideas	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Promoting Exploring and presenting opportunities	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Developing Assessing and testing the applicability of new approaches	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Organising Establishing and implementing ways of making things work	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Producing Concluding and delivering outputs	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Inspecting Controlling and auditing the working of systems	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High
Maintaining Upholding and safeguarding standards and processes	Low 1 2 3 4 5 High	Low 1 2 3 4 5 High

Activity: Types of Work – Team

All eight Types of Work and Linking need to be carried out effectively for a team to succeed. The eight Types of Work do not always occur sequentially. Often teams will work on multiple Types of Work simultaneously or may complete the Inspecting work function at regular intervals as part of quality control systems.

Which two Types of Work does your team perform well?

How much time does your team spend working in these areas?

How does this impact on team performance?

Which two Types of Work does your team neglect?

How much time does your team spend working in these areas?

How does this impact team performance?

TEAM MANAGEMENT SYSTEMS ©

Work Preferences

A vital aspect of working in a team is understanding how you like to work and how it differs from other team members. For example, some people really like the Promoting work of a team but dislike the Inspecting work. Others might really enjoy the Organising work but dislike Innovating work. The next part of the research began by trying to identify how a person's work preferences could be measured. The work of Carl Jung, the Swiss philosopher and psychologist, was adapted to apply to work situations.

Work Preferences and the Four Ps

Although the Team Management Profile Questionnaire measures work preferences, it does not measure skills in these preference areas. However, in our experience of working with teams worldwide, we have found that:

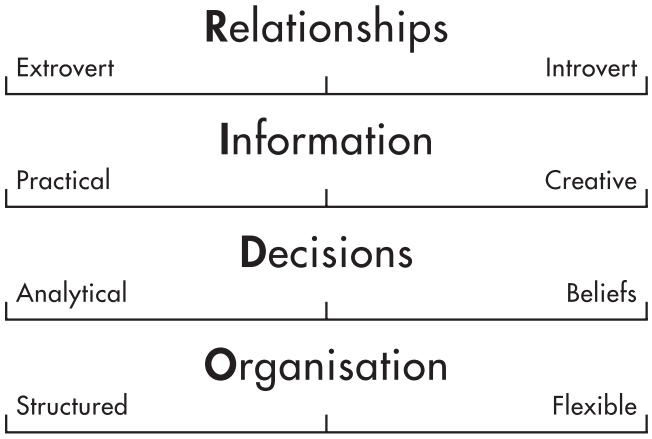
We tend to **practise** *what we* **prefer** *and become more* **proficient** *in our preferred areas. This, in turn, gives us* **pleasure** *from our work.*

Usually, people work better in areas that match their preferences. We always tend to practise what we prefer. For example, you might prefer to play golf rather than squash: therefore at any opportunity, you are more likely to be on the golf course rather than on the squash court. The more you practise golf, the more likely you are to perform better at it and maybe even become perfect! So it is at work.

We tend to **practise** what we **prefer**, and over time, we become more **proficient** in the areas of our preference. This then gives us **pleasure** from our work. In the workplace, four key issues lie at the heart of what makes people prefer to work in different ways:

- How people prefer to **Relate** to others at work
- How people prefer to gather and use **Information** at work
- How people prefer to make **Decisions** at work
- How people prefer to **Organise** themselves and others at work

These are presented in the Four Work Preference Measures (RIDO) model and are referred to as the **RIDO** scales (**R**elationships, **I**nformation, **D**ecisions, **O**rganisation).



Four Work Preference Measures (RIDO)

Four Work Preference Measures (RIDO)

How you prefer to **Relate** to others at work

Each day at work you have to interact with others to get the work done. Some people like to do this in an **Extroverted** way, meeting frequently with others, talking through ideas, and enjoying a variety of tasks and activities. Other people, however, are more **Introverted**, preferring to think things through on their own before speaking and generally not having a high need to be with others.

Extrovert (E)

- Will often think things out by talking them through
- Enjoy meeting other people and often seek social gatherings
- Enjoy a variety of tasks and activities
- Are stimulated by unanticipated interruptions
- When speaking publicly will often ad lib
- Are likely to contribute a lot at meetings
- Can be impulsive

Introvert (I)

- Prefer to think things through before speaking
- Do not have a high need to meet regularly with others
- Like to concentrate on a few tasks at a time
- Dislike unanticipated interruptions
- When speaking publicly will prepare in depth and speak to a plan
- May be more quiet at meetings
- Will be more likely to consider things before acting

How you prefer to gather and use **Information** at work

In the process of relating with others, people will gather and use various types of information. They do this either in a **Practical** or a **Creative** way. Practical information-gatherers prefer to work with tested ideas and pay attention to facts and details, whereas Creative information-gatherers are ideas-oriented and always looking for ways to change and improve things.

Practical (P)

- Prefer clearly defined problems
- Are present-oriented
- Like to work with tested ideas
- Are down to earth
- Like to work with real things
- Are patient with routine work
- Prefer schedules and standard systems and procedures
- Pay attention to facts and details
- Search for the standard problem-solving approach
- Are usually sound on details but may not always see the total picture

Creative (C)

- Enjoy ambiguous problems
- Are future-oriented
- Regularly float new ideas
- Have 'head in the clouds'
- Look for possibilities and implications
- Get bored with routine work
- Are always searching for the new way
- May get details wrong and jump beyond the facts
- Like complexity and search for creative approaches
- Will often see the total picture but miss details

TEAM MANAGEMENT SYSTEMS ©

How you prefer to make **Decisions** at work

Once the information is gathered, it is necessary to make decisions. Some people go about this in an **Analytical** way, setting objectives and choosing those decisions which best meet the objectives. Others may prefer to make decisions based on their **Beliefs**, where personal principles and values are more important.

Analytical	Beliefs

Analytical (A)

- Try to establish objective decision-making criteria
- Measure decisions against pay-offs
- Can sometimes be seen as detached and 'clinical'
- Will emphasise deciding according to situation
- Are open to change depending on the situation
- Negotiate on the evidence
- Have concern for fairness based on the rules
- Like analysis and clarity
- Are task-oriented
- Set objectives and beliefs may follow

Beliefs (B)

- Have personal, subjective decision-making criteria
- Measure decisions against beliefs
- May be over-committed to a point of view
- Believe in deciding on personal considerations
- Will resist change if it opposes beliefs
- Negotiate on the rights and wrongs of the issues
- Believe fairness relates to values and beliefs
- Like harmony based on common values
- Are principles-oriented
- Allow objectives to emerge from beliefs

How you prefer to **Organise** yourself and others at work

Decisions have to be implemented within a team framework. Some people like a **Structured** environment, where things are neat and tidy and where action is taken quickly to resolve issues. Others prefer to be more **Flexible** and to make sure that all possible information has been gathered before decisions are taken. They prefer to find out about situations and delay taking action until they are sure that all alternatives have been looked at.

Structured	Flexible

Structured (S)

- Like clarity and order
- Are action-oriented, concerned with resolving issues
- Will develop and stick to a plan
- May rush to quick decisions without sufficient information
- Are time conscious and will keep to deadlines
- Are reluctant to change once judgment is made
- Dislike ambiguity
- Emphasise concluding and resolving overdiagnosing

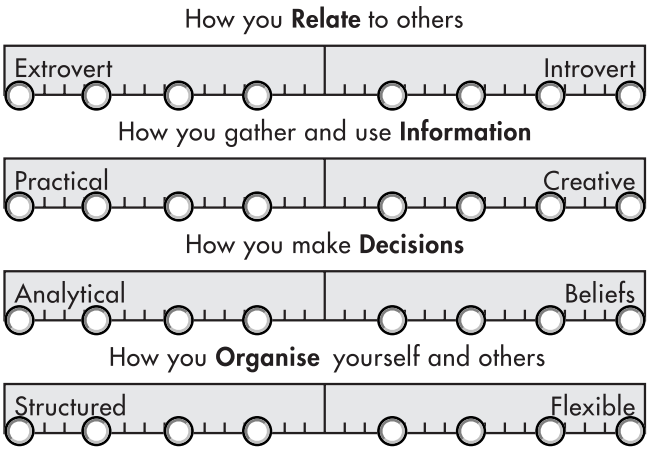
Flexible (F)

- Are information-oriented, may procrastinate in search of more information
- Will often change plans from day to day
- Are prone to 'information overload' which can delay decisions
- Will often fail to meet deadlines
- Are open-minded and curious
- Will change mind according to available data
- Tolerate ambiguity
- Emphasise diagnosing over concluding and resolving

The Team Management Profile Questionnaire has been researched and designed to show where you lie on each of the Four Work Preference Measures (RIDO). There are 15 items for each of the measures giving 60 items in total. The method of answering these items gives a range of preferences across the measures. For example, the research showed that no one is totally extroverted, and they will most likely spend some time in introverted activities.

Activity: Work Preference Measures

Read the summary points again and on the scale images below plot where you think your work preferences may lie. For example, are you mainly **Introverted**, **Creative**, **Analytical** and **Structured** in the way you prefer to work?

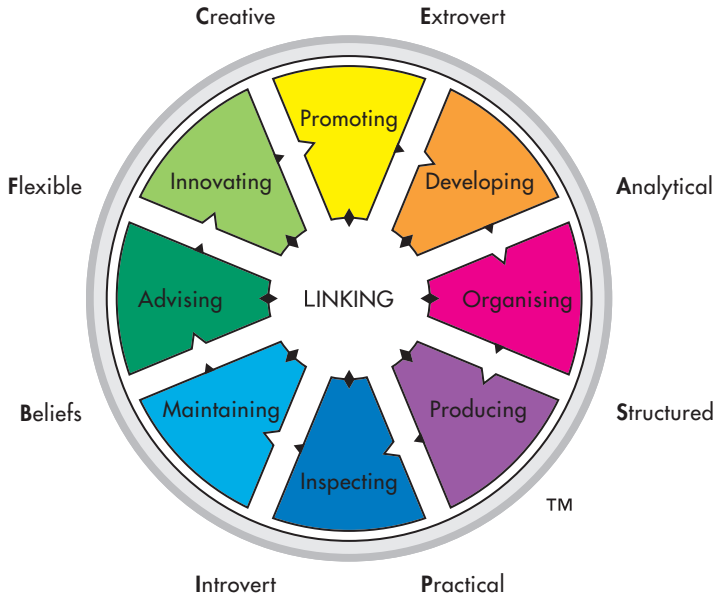


Combining the Models

The next step in the research was to relate the results from the Team Management Profile Questionnaire to the Types of Work Model. The end result was the mapping of the Four Work Preference Measures (RIDO) onto the model.

For example, it showed that those whose preferences were for **Extroverted** relationships and **Creative** use of information mapped most strongly in the **Promoting** area.

Also, those whose preferences were for **Beliefs** based decision-making and **Introverted** relationships mapped most strongly in the **Maintaining** area.



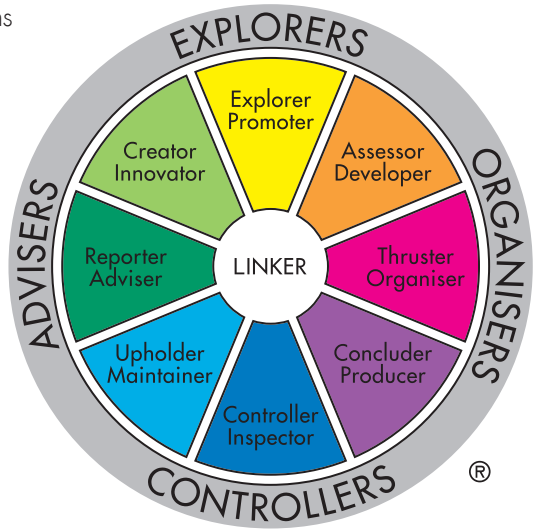
Types of Work Wheel
mapping Four Work Preference Measures (RIDO)

TEAM MANAGEMENT SYSTEMS ©

The Team Management Wheel

From here, the Team Management Wheel was created after discussions with people in the workplace. For example, we discovered:

- People who enjoyed Innovating work described themselves as creative. From this information, we derived the name **Creator-Innovator** for those who enjoy coming up with ideas and experimenting to see if they work.
- Likewise, those who enjoyed **Promoting** work often said that they saw themselves as explorers looking for new opportunities. The term **Explorer-Promoter** described this role perfectly.
- Those who liked **Developing** plans and processes said they enjoyed assessing ideas and opportunities to see if they would work. We called them **Assessor-Developers**.
- Those who preferred **Organising** people and resources said they liked thrusting into action to set dates, timetables and achieve results. So the descriptor **Thruster-Organiser** was formed.



Team Management Wheel

Similarly, the other roles received their names through the characteristics exhibited by people who particularly enjoyed the various work functions.

- **Concluder-Producers** those who said they liked working in a systematic way to produce and deliver and describe themselves as having a preference for concluding assignments according to a plan.
- **Controller-Inspectors** those who said they liked working on details to audit procedures and processes and therefore saw themselves as having an emphasis on control.
- **Upholder-Maintainers** those who considered they had strong beliefs and principles with which they wanted to work and felt they would put a premium on upholding standards and values.
- **Reporter-Advisers** those who said they enjoyed giving and gaining information also performed the reporting role for the team.

The Team Management Wheel represents the combination of the Types of Work Wheel and the Four Work Preference Measures (RIDO). As such, this simple model helps illustrate both what we like to do as well as how we go about our work.

To further your understanding of the roles, the major characteristics and general behaviours are shown in the table on page 11 and in the brief descriptions following. The Linker role is not measured by the Team Management Profile Questionnaire but is discussed in more detail on page 19.

Team Management Wheel Roles – Overview

ROLE	MAJOR CHARACTERISTICS	GENERAL BEHAVIOURS
Reporter Adviser	• Supporter, helper, tolerant • A collector of information • Dislikes being rushed • Flexible and Beliefs-based	• Not time conscious • Enjoys finding out • Issues interpreted personally • Tends to put off decisions
Creator Innovator	• Imaginative • Enjoys complexity • Future-oriented • Creative and Flexible	• Often irregular work patterns • May miss deadlines • Continually searching for new ways • Independent
Explorer Promoter	• Persuader, 'seller' • Influential and outgoing • Enjoys exploring new ideas • Extroverted and Creative	• High energy level • Knows lots of people • Good at getting resources • A visionary • A good communicator
Assessor Developer	• Objective • Experimenter • Enjoys prototype or project work • Extroverted and Analytical	• Moves from task to task • Dislikes routine • Gregarious but independent • Likes plans
Thruster Organiser	• Results focused • Action orientated • Organises and implements • Analytical and Structured	• Makes things happen • Action via deadlines • Will exert pressure • Impatient • May overlook people's feelings
Concluder Producer	• Pragmatic • Results focused • Values effectiveness and efficiency • Practical and Structured	• Time conscious • Follows through to the end • Dislikes change • Prefers routine • Makes schedules work • Emphasises outputs
Controller Inspector	• Detail focused • Quite and reflective • An inspector of standards • Introverted and Practical	• Critical of inaccuracies • Enforcer of regulations • Meticulous • Quiet and reflective • Concentrates in depth on a few issues at a time
Upholder Maintainer	• Loyal and supportive • Strong sense of right and wrong • Personal values are important • Introverted and Beliefs-based	• Can help weld the team together • Prefers advisory role • Can negotiate well • Usually has strong feelings • Quiet approach • Dedicated to their beliefs

TEAM MANAGEMENT SYSTEMS ©

To further your understanding, a brief description of each role is provided below.

Reporter-Advisers

Reporter-Advisers represent the classic advisory role on the Team Management Wheel. They are excellent at gathering information and putting it together in such a way that it can be readily understood. If they are more introverted, they will probably rely on written formats for their information, whereas if they are more extroverted, they will be good communicators and probably rely on a network of colleagues and acquaintances for their data.

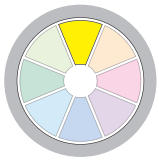
Reporter-Advisers are patient people who prefer to make sure they have all the information before they take action. This often causes others to accuse them of procrastination, but **Reporter-Advisers** will typically respond: "How can I take action unless I have all the information?"

Reporter-Advisers do not enjoy conflict and have 'antennae' that can detect a potential conflict well before it happens. Usually, they will move to defuse the conflict or position themselves well away from any direct effects.

Creator-Innovators

Creator-Innovators are people who are very much 'future-oriented' and will enjoy thinking up new ideas and new ways of doing things. Usually, they are very independent and will pursue their ideas regardless of present systems and methods. They need to be managed in such a way that their ideas can be developed without too many organisational constraints. Sometimes organisations set up research and development units (often separated from the production unit) to allow these people to experiment with ideas.

Creator-Innovators are sometimes perceived as having their 'head in the clouds', but this is usually because they are looking to tomorrow rather than worrying about today. They tend not to be very structured in the way they go about things and may sometimes appear disorganised and absent-minded. Some are more introverted, preferring to be 'back-room' people working on their own or in small groups on important problems. Others can be more outgoing and even zealous in the way they put forward ideas they really believe in.



Explorer-Promoters

Explorer-Promoters are excellent at taking ideas and promoting them to others, both inside and outside the organisation. They enjoy being with people and will usually have a network of colleagues that they use when gathering information and testing out opportunities. They are often advocates of change and are highly energised, active people with several different activities on the go at once. They enjoy being 'out and about' and are good at bringing back contacts and resources which can help the organisation move forward.

Explorer-Promoters are usually entrepreneurial in their approach, and they can be very persuasive. They are often influential and can talk easily, even on subjects where they are not experts. They are excellent at seeing 'the big picture' and developing an enthusiasm for innovation among other people. However, they are not always interested in **Inspecting** and **Organising**, and they may not pay sufficient attention to details.

Explorer-Promoters enjoy 'off-the-cuff' conversations and need to interact with others to be at their productive best. They do not like spending long periods in a back-room working alone on their problems – they need people to stimulate them. In this regard, they can be energy-giving, but equally, their effects on others can sometimes be energy-draining.

Assessor-Developers

Assessor-Developers are located on the Team Management Wheel midway between the **Explorers** and the **Organisers** and therefore exhibit both of these characteristics. They may not always think up good ideas for themselves, but they are excellent at taking the ideas of others and making them work in practice. They are usually sociable, outgoing people who enjoy looking for new markets or opportunities. They will then take the idea and match it to the opportunity, always mindful of the organisational 'bottom line' constraints. They often make good product development managers or people concerned with assessing new ventures.

Assessor-Developers usually display a strong analytical approach and are at their best where several different possibilities need to be analysed and developed before a decision is made. They like organising new activities and respond well to such challenges, taking an idea and pushing it forward into a workable scheme. However, once the activity has been set up and proven to work, they will often lose interest, preferring to move on to the next project rather than engage in the production and control of the output.

Thruster-Organisers

Thruster-Organisers are people who enjoy making things happen. They are analytical decision-makers, always doing what is best for the task even if sometimes their actions upset others. Their great ability is to get things done, and for this reason, they are often found working in project management positions. They will 'thrust' forward towards a goal, meeting conflict head-on if necessary. They emphasise targets, deadlines and budgets, and will ensure that people are organised to take action.

Thruster-Organisers will usually prefer to work to a plan and in a structured manner, so that objectives are clearly set out, and everyone in the team knows what has to be achieved and when. They excel at organising people and systems so that deadlines are met. They will set objectives, establish plans, work out who should do what and then press for action. They tend to be task-oriented and, in their pursuit of goals, may sometimes ignore people's feelings. This, more than anything else, gets them into difficulties with their colleagues.

Concluder-Producers

Concluder-Producers are practical people who can be counted on to carry things through to the end. Their strength is in setting up plans and standard systems so that outputs can be achieved on a regular basis in a controlled and orderly fashion. For this reason, they usually do not like rapid change, as it interferes with the efficient systems they have established for doing the work.

For **Concluder-Producers**, the challenge lies not in dreaming up new ideas, but in doing the work effectively and efficiently. They are often more patient than others with routine work, as the drive for them comes from a 'job well done'. As a result, they are sought-after as managers for their ability to work in a quick, reliable, dependable and stable manner, and to deliver results.

Controller-Inspectors

Controller-Inspectors are quiet, reflective people who enjoy the detailed side of work, such as dealing with facts and figures. They are usually careful and meticulous and can spend long periods of time on a particular task working quietly on their own.

Controller-Inspectors are comfortable working within the rules and regulations which have been established in the organisation. They would probably argue that the rules have been made to ensure that the organisation works in the most efficient manner, and therefore everyone should follow them. For this reason, they enjoy working in situations where their output is guided by organisational or governmental regulations. We have found many of them working in finance, accounting and quality-control positions where their Inspecting preferences are important assets for the work they are doing.

The formulation and checking of contracts is an area that **Controller-Inspectors** sometimes enjoy, along with computer systems and issues on safety and security.

Upholder-Maintainers

Upholder-Maintainers are people with strong personal values and principles, which are of prime importance in their decision-making. Usually, they have a high concern for people and will be strongly supportive of those who share the same ideals and values as they do.

They prefer to work in a control-oriented supportive way, making sure that things are done according to their standards. In addition, they prefer an advisory role in the background rather than a leading executive role. However, because of their strong principles they may 'dig in their heels' when confronting issues that oppose their beliefs. They will not react in an extroverted, quick-tempered way but in a more resilient manner.

The **Upholder-Maintainer** who is in support of the team is an invaluable member, providing guidance and help on issues that need to be well thought through in terms of principles rather than just 'economics'.

Activity: Your Team Management Profile

Your own Team Management Profile will indicate your major role preference based on how you answered the Team Management Profile Questionnaire. To help you understand your profile results, transfer the following information from your profile to this workbook.

My major role:

My related roles:

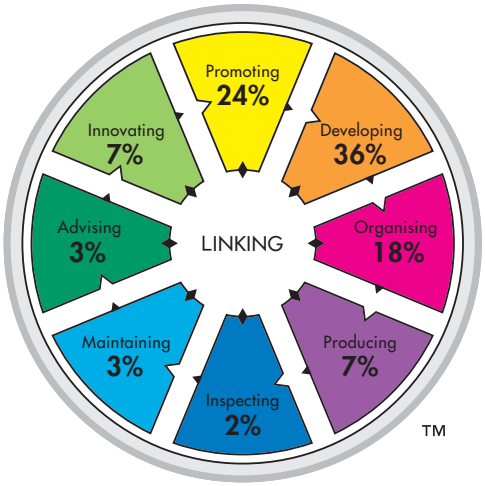
Work Preference Distribution

This section of your profile converts your net scores on the Four Work Preference Measures (RIDO) into percentage distributions around the Types of Work Model, as shown in the example.

This information may help you to allocate work amongst team members so that there is a good overlap between people's preferences and the tasks they are working on. The information can also help you make decisions about your career as it will indicate those Types of Work that you like best and those that you like least.

If your net scores are low, then your percentage distribution will indicate that you are relatively comfortable working on any task. If your net scores are high, the percentage distribution will vary significantly, indicating high preferences for some aspects of work and low preferences for others.



Example of a Work Preference Distribution

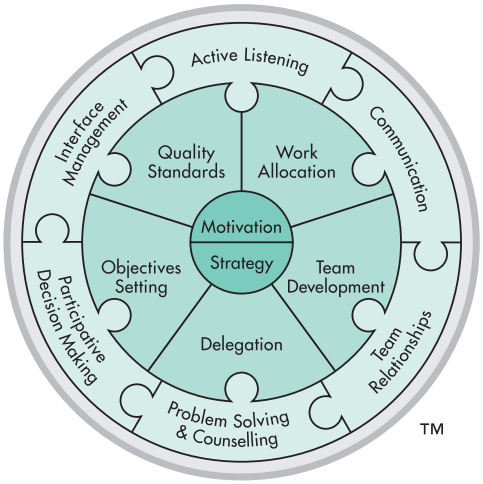
What are the implications for your work?

Linking

At the centre of the Team Management Wheel is the Linker role, defined not by preferences but by the skills that all team members need to develop. The centre circle of the Types of Work Wheel can be expanded to show the three groups of Linking Skills – People Linking, Task Linking and Leadership Linking.

All team members need to implement the People Linking Skills, particularly Communication. It is important to learn how to vary your communication style so that it matches other people's role preferences. This is what we refer to as 'Pacing', it requires 'putting yourself in someone else's shoes' and communicating with them in a way that respects their preferences. Other people also need to learn how best to interact with you.

Recognising that people are different and that different communication processes are necessary with different people is the key message behind the Team Management Wheel. Some points to consider when communicating with the various roles on the Wheel are given in the table on the following page.



Linking Leader Model

Activity: Linking (Pacing)

To communicate best with me, I prefer it when people:

I prefer it if they don't:

Tips for Linking (Pacing)

ROLE	DOs	DON'T's
Reporter Adviser	• Be flexible • Develop personal relationships • Be cooperative • Give personal thanks • Establish harmony • Allow them to express their concerns	• Put facts before feelings • Move too fast • Be insincere
Creator Innovator	• Explore ideas • Be enthusiastic • Ensure you have some knowledge of the area under discussion • Give personal thanks • Record important decisions in writing	• Be too structured • Force them into deadlines • Focus on the solution before you have discussed the problem
Explorer Promoter	• Explore ideas and be flexible • Allow them to talk • Recognise their contributions in public • Concentrate on the future • Be enthusiastic • Record important agreements in writing	• Talk about details • Take issue with their opinions unless they persist • Dwell on the past
Assessor Developer	• Be prepared • Analyse issues fully • Explore possibilities • Be factual • Speak clearly, logically and precisely • Look for alternatives	• Talk about subjects you know little about • Give too many opinions • Waste time
Thruster Organiser	• Be work focused • Be factual and punctual • Be goal orientated • Give incentives to perform • Make things happen • Summarise regularly	• Make it personal, instead focus on the facts surrounding disagreements • Be ambiguous • Get off the subject
Concluder Producer	• Be structured • Give notice of proposed changes • Be practical • Stick to your word • Keep to deadlines • Focus on results	• Change your mind too frequently • Focus on ideas without considering how they would be implemented (or work in practice) • 'Waffle'
Controller Inspector	• Use email to communicate • Send written information before meetings • Slow down your pace • Take time to understand them • Talk about details • Think before you speak	• Drop in unexpectedly • Surprise them • Rush them • Concentrate on the future at the expense of the past
Upholder Maintainer	• Develop personal relationships • Be clear and precise • Encourage them to talk • Be supportive	• Dominate discussions • Ignore their feelings • Focus on the numbers only, think also about the impact on people

Career Journeys

TMS research studies found that people's work preferences remained relatively stable over short periods of time. Continuing research has confirmed that over a period of six years, 91% of people had either no change in their work preference or change on only one work preference measure. Of the remaining 9%, 8% experienced changes on two preferences, 1% changed on three and no-one changed on four preferences.

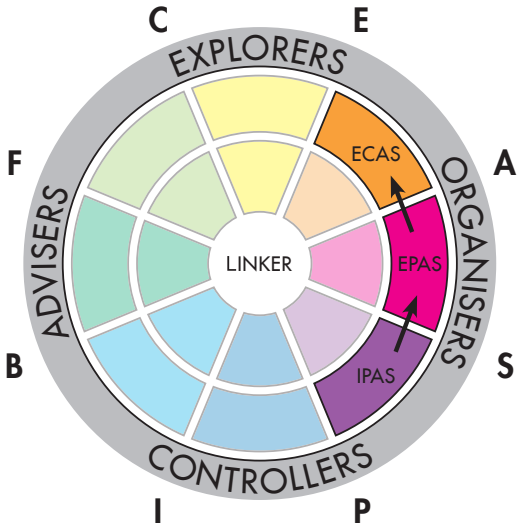
Movement in work preferences occurs as a gradual change over time. This change is often noticed in people who have made a conscious effort to 'develop' themselves. These types of gradual changes are known as 'career journeys'. It is very useful to plot your own 'career journey' from when you first started work until your present job.

The Line Manager

Many young people start work with preferences for **I**ntroversion, **P**ractical information-gathering, **A**nalytical decision-making and **S**tructured organisation. This gives them the major role of **Concluder-Producer** (**IPAS**). They work most effectively in this way for a number of years.

Over time, their **I**ntroverted approach to work will move towards **E**xtroversion as with experience and management development programmes their preferences change. This move takes them to a major role of **Thruster-Organiser** (**EPAS**). This role is often very effective in project management where projects have to fall within time limits and budgets.

Again, through management development and strategic planning, they are encouraged to be more future-oriented in their information-gathering. This causes their work preference to move towards the **C**reative end of the work preference measure. This results in a move to the **Assessor-Developer** role (**ECAS**).

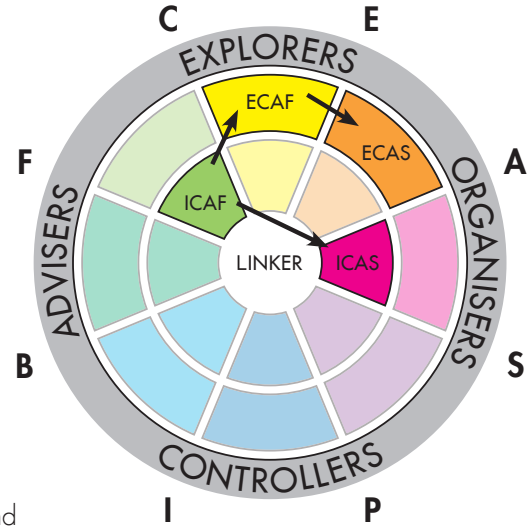


Team Management Wheel
16-fold Model

The Research and Development Scientist

Another well-documented 'career journey' is that of the researcher. These people often start their careers with preferences for **I**ntroversion, **C**reative information-gathering, **A**nalytical decision-making and **F**lexible organisation, which gives them the major role of **Creator-Innovator** (**ICAF**). Whether their job moulds their preferences or whether they are attracted to this type of job because of their preferences is unclear.

However, there are two 'career journeys' which are common to these people. The first is a move towards more **S**tructured organisation if they move into supervisory roles where the focus is on outputs, monthly reports and figures. This is often not an easy move for them to make and it may take some time for them to be comfortable in this new role. The effect is to change their major role to that of **Thruster-Organiser** (**ICAS**).

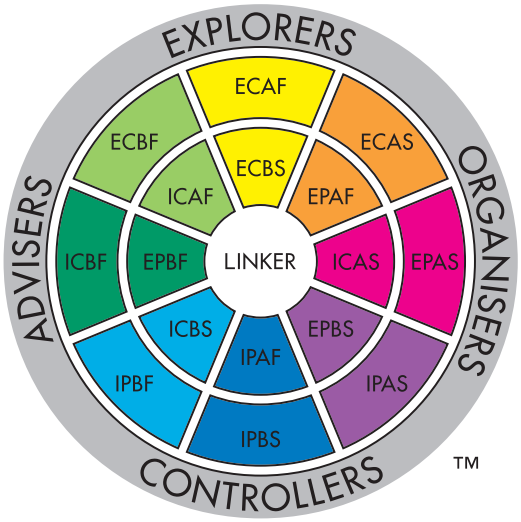


Team Management Wheel
16-fold Model

The second career journey is a move towards **E**xtroversion, as they have to communicate with their team and perhaps persuade other people to accept their ideas. This change takes them into a major role of **Explorer-Promoter** (**ECAF**). Many continue their journey clockwise around the Wheel as they develop more **S**tructure in the organisation of themselves and others. This movement aligns them more with the organisational culture of **A**nalytical decision making and **S**tructured organisation, resulting in a major role of **Assessor-Developer** (**ECAS**).

Activity: Career Journey

Please list below some of your more significant jobs. Next to them, indicate your preferences in terms of the 16 segments of the Team Management Wheel, and also what you consider the job required.



16-fold Model of the Team Management Wheel

16-Fold Model Key

(**E**) Extrovert	(**I**) Introvert
(**P**) Practical	(**C**) Creative
(**A**) Analytical	(**B**) Beliefs
(**S**) Structured	(**F**) Flexible

Norm Data

Many people are interested in how their data compares with our worldwide norms. The Team Management Systems database contains results from over 600,000 respondents who have completed the Team Management Profile. The distribution of major roles around the Team Management Wheel is illustrated in the image to the right.

Major role preference distribution
Total Worldwide Database (n=612,291)

Median scores on RIDO

The median score is the point where 50% of people within the sample have a higher net score, and 50% have a lower net score. Using data from the Research Manual (Fifth Edition), the median scores on **RIDO** are:

E:3 P:2 A:12 S:5

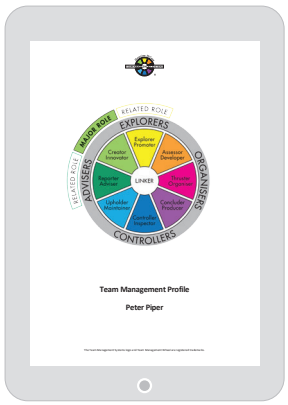
Activity: Norm Data

How do your scores compare with the Worldwide Norms?

Maintaining your Learning

The Team Management Profile is a starting point for self-reflection and discussion about your approach to work. Now that you have started the process, it is important to maintain your learning to maximise the investment you have already made.

Team Management Systems has made this easy by providing a range of additional content that you can access online via *TMS Global*.



TMS Global **Diagnostic Tools**

Covering areas like communication skills and team reviews, *TMS Global* contains a number of diagnostic tools that integrate with your personal Team Management Profile data to provide you with unique insights into how you can improve the way you work.

Other content includes videos and eBooks to make it easy to apply your learning.

Activity: Maintaining your Learning

How will you maintain your learning and development?
